Product description	
Type	0910 ASL 408
Order No.	
Description	AS-Interface flat cable module with 4 digital inputs to connect standard sensors and 4 digital outputs to connect standard actuators, combined FIXCON/M12 socket, infrared interface for the addressing
Diagnostics	According to the AS-Interface specification 2.1, periphery errors like short circuits or overloads can be sent to the master in the form of a group diagnostics. In addition, there is a status LED on the relevant slave.
Note	The input channels are connected together. That allows a greater connection flexibility (see pin assignment). In case of connection of a two-channel sensor to input socket 1 or 3 a further sensor must not be plugged to input socket 2 or 4 respectively due to the Y wiring of the inputs. The application of these products in harsh environments should always be checked before use. Specifications subject to alteration.
